

Temporal-resolution saturation: signed structural-parametric angle ( $\theta$ ), stratified by climate category

● TS12-TS04    ● TS48-TS04    — Regional p25-p75 of medians (10 R10 regions)    ---  $|\theta| \geq 26.6^\circ$  (structural rival,  $|S| \geq \frac{1}{2}|P|$ )  
● TS24-TS04    ● TS72-TS04    — Regional min-max    .....  $\theta = 0^\circ$  (no structural shift)  
● TS36-TS04    ● World median    —  $|\theta| > 45^\circ$  (structural dominance)
